Integrated Safety Management System

(2-3 Days)

INTRODUCTION

An Integrated Safety Management System (ISMS) provides organisation goal setting, planning, and measuring performance. It defines how it intends the management of air safety is to be conducted as an integral part of the organisation's business management activities.

A Safety Management System is woven into the fabric of an organization. It becomes part of the culture; the way people do their jobs.

Synopsis

Our Integrated Safety Management System training includes the following five SMS features :

- 1) A comprehensive systematic approach to the management of aviation safety within the maintenance organisation, including the interfaces between the company and its suppliers, sub-contractors and business partners.
- 2) A principal focus on the hazards of the business and their effects upon those activities critical to safety.
- 3) The full integration of safety considerations into the business, via the application of management controls to all aspects of the business processes critical to safety.
- 4) The use of active monitoring and audit processes to validate that the necessary controls identified through the hazard management process are in place and to ensure continuing active commitment to safety.
- 5) The use of Quality Assurance principles, including improvement and feedback mechanisms.
